## Focus on Quality

AVi is an ISO:9001 and ISO:14001 registered company which takes pride in producing top quality products in a long term, sustainable way.

Neale joined AVi in October 2015 as a Quality Inspector, where he monitors, enforces and audits our bespoke 'traffic light' quality management system to ensure that consistent standards are achieved throughout all company processes.

He runs regular soapbox talks with staff to implement new procedures and processes to maintain the high standards throughout the company's activities.

His hands-on approach has been beneficial with our staff and made a positive impact with our customers as they consistently receive high quality products.

## Embracing synergy at AVi

As we move into 2016, AVi is expanding its shop floor and office space by over 4000 sq ft and moved its key personnel and processes closer together to improve the throughput and flow of work, manufacturing processes, efficiencies and synergy.

Synergy is described when '*a cohesive group is more than the sum of its parts and the ability of a group to outperform even its best individual member*' and this move and continued expansion is the culmination of our long term ambitions.

We expect that this change will bring added benefits to our customers by improving the communication pathways, maintaining quality and efficiencies in production to consistently achieve delivery timescales.

### Headlines:

- Quality Inspector appointed
- Continued expansion / embracing synergy
- AVi introduces the Supermover Range

## AVi – Supermover Range

We are pleased to announce that AVi has acquired the intellectual property rights from MotorMover.

We have worked in this industry for many years and this opportunity will enable AVi to develop our own range of **Supermover** products.

The **Supermover** uses weight transfer technology to manoeuvre payloads much heavier than itself – up to 20 tonnes.
